# CHILDCARE AND SUPPORT FACILITIES FOR STUDENT MOTHERS

Lankaran State University recognises the importance of providing support to students who have recently become mothers, helping them balance their parental responsibilities with their academic commitments.

In 2025, preschool education facilities located near the university's different campuses provided accessible childcare options for student mothers. These facilities include “Nağıl” Nursery School and Kindergarten, located near the university. The proximity of these institutions to the university campuses makes it easier for student mothers to arrange daily care for their children.

The university has a dedicated breastfeeding room to meet the needs of students who have recently become mothers, allowing them to breastfeed their babies in a comfortable and private environment. This room helps ensure the personal comfort and well-being of student mothers and supports their continued participation in academic activities.

These facilities help mothers balance their family and academic responsibilities, continue their higher education, and feel more comfortable within the university environment.
