PURPOSE AND SCOPE

Lankaran State University considers the efficient use of energy resources, the reduction of energy losses, and the improvement of building energy performance to be important aspects of sustainable development.

The purpose of this Policy is to ensure that energy efficiency requirements are taken into account in the University's new construction, reconstruction, and renovation projects, to reduce energy consumption, and to promote the use of energy-saving technologies.

This Policy applies to the University's academic and administrative buildings, classrooms, laboratories, libraries, dormitories, and other relevant buildings and facilities.

LEGAL AND REGULATORY FRAMEWORK

This Policy is based on the applicable legislation of the Republic of Azerbaijan and the following regulatory documents:

The Law of the Republic of Azerbaijan On the Efficient Use of Energy Resources and Energy Efficiency.

The Minimum Energy Efficiency Standards for Buildings, approved by Resolution No. 287 of the Cabinet of Ministers of the Republic of Azerbaijan dated 26 August 2023.

The Rules on Improving the Energy Efficiency of Construction Projects and Saving Energy Resources, approved by Resolution No. 73 of the Cabinet of Ministers of the Republic of Azerbaijan dated 11 March 2014.

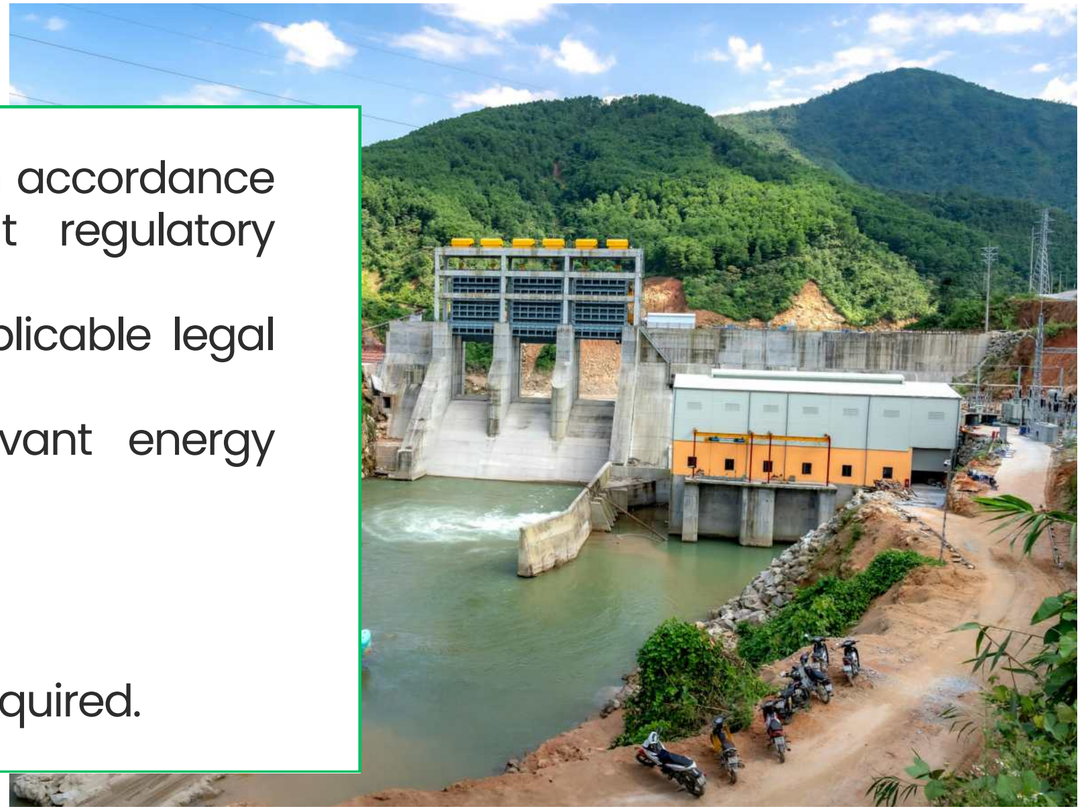

ENERGY EFFICIENCY REQUIREMENTS

Energy efficiency requirements must be taken into account in the design documentation for new construction, reconstruction, and relevant renovation projects.
Particular attention shall be given to the following:
Improving building thermal insulation and reducing energy losses;
Installing energy-efficient lighting systems;
Selecting efficient heating, cooling, and ventilation systems;
Considering the thermal performance of windows, doors, roofs, and external walls;
Measuring and regulating energy consumption;
Assessing the use of renewable energy sources where technically and economically feasible.
Projects must be designed and implemented in accordance with the applicable construction standards and energy efficiency requirements.

ENERGY PERFORMANCE INDICATORS AND DOCUMENTATION

The energy performance of buildings shall be assessed in accordance with the methodologies established by the relevant regulatory documents.
Depending on the characteristics of the project and applicable legal requirements, project documentation may include:
Building energy performance indicators and the relevant energy efficiency class;
Thermal performance characteristics;
Information on heating, cooling, and ventilation systems;
Energy consumption calculations;
An energy performance certificate for the building, where required.

RESPONSIBILITIES AND MONITORING

The University Management shall designate the structural unit responsible for implementing this Policy.
The responsible unit shall:
Monitor the incorporation of energy efficiency requirements into construction and renovation projects;
Oversee the inclusion of relevant technical indicators in project documentation;
Collect information on energy consumption and implemented measures;
Develop proposals to address non-compliance and improve the Policy.
The implementation of this Policy may be assessed using the following indicators:
Number of construction and renovation projects incorporating energy efficiency requirements;
Number of buildings with energy performance certificates, where required;
Energy-saving measures implemented;
Available data on energy consumption.
Monitoring results shall be used to inform the planning of future projects and identify opportunities for energy savings.

FINAL PROVISIONS

The Building Energy Efficiency Policy of Lankaran State University aims to improve energy efficiency in new construction, reconstruction, and renovation projects, reduce energy losses, and promote the responsible use of resources.
This Policy shall be implemented in accordance with applicable legislation and regulatory requirements. It shall enter into force upon approval by the University's authorized body and shall be reviewed and updated when necessary.
