LSU Organizes Awareness-Raising Activities on the Development of Inclusive Education in Regional Schools

Lankaran State University (LSU), in collaboration with the Lankaran-Astara Regional Education Department, organized awareness-raising activities in regional schools dedicated to the development of inclusive education.

The meetings were held at general education schools in the Masalli, Lerik, Astara, and Lankaran districts. Discussions focused on the implementation of inclusive education, ensuring equal educational opportunities, supporting students with special educational needs, and the role of teachers and psychologists in this field.

Representatives of LSU's academic staff participated in the activities, sharing their knowledge and professional experience.

The initiative aimed to increase awareness of inclusive education in regional schools, enhance teachers' knowledge and skills, and strengthen the development of an inclusive learning environment.

LSU Representatives Hold a Meeting with School Students on Career Guidance and Academic Specialization Choices

Representatives of Lankaran State University (LSU) held a meeting with senior students at a secondary school to raise awareness about career guidance and future academic specialization choices.

The heads of the university's Department of Mathematics and Informatics and Department of Foreign Languages participated in the meeting, providing information about LSU's modern infrastructure, educational opportunities, advantages, and main areas of activity.

Students also received recommendations on making informed decisions about their future fields of study, considering labour market requirements, career planning, and professional development.

The main aim of the meeting was to increase students' awareness of higher education opportunities and support them in making informed academic and career choices.

LSU's Teaching and Practical Training Facilities Provide Learning Opportunities for School Students

Lankaran State University (LSU) has organized educational and practical sessions for senior students from regional schools as part of a cooperation initiative between general and higher education institutions.

Within the framework of the project, students from secondary schools in Lankaran and the Foreign Languages Specialized Gymnasium participated in demonstration lessons and laboratory sessions in Chemistry and Biology, making use of the university's modern laboratory facilities.

The sessions, conducted by LSU's academic staff, enabled students to gain practical skills alongside theoretical knowledge and receive answers to their questions.

The project aims to enhance students' scientific knowledge and practical skills, familiarize them with the higher education environment, and support their future decisions regarding university and career choices. Students from other regional schools are also expected to benefit from LSU's teaching and practical training facilities.

LSU Holds a Meeting with Award-Winning School Students

Lankaran State University (LSU) held a meeting with members of the “INFO ORION” team from Secondary School-Lyceum No. 6 named after S. Kazimbayov in Lankaran, who achieved success in the FIRST LEGO League Azerbaijan competition.

The meeting focused on the students' achievements in robotics, their interest in technology, and their innovative skills. The team members demonstrated their self-designed robots and explained how they operate to university students.

University representatives congratulated the students on their achievements and emphasized the importance of supporting talented school students and developing their scientific and technical creativity.

The meeting contributed to experience sharing between school students and university students and encouraged greater interest in robotics and innovative technologies.

LSU Staff Member Conducts Environmental Awareness Training for School Students

Awareness-raising information sessions were held for school students within the framework of the project “ECOpupils: Environmental Literacy Development Programme for School Students,” which was selected as a winner of the 8th Grant Competition on the Development and Innovation in Education announced by the Ministry of Science and Education.

As part of the project, a training session titled “What Is Ecology?” was organized. The training focused on the concept of ecology, the importance of environmental protection, and the development of environmentally responsible behaviours in everyday life.

During the interactive session, students' questions were answered, and discussions were held to enhance their environmental knowledge and awareness.

The main aim of the project is to increase school students' awareness of environmental protection, strengthen their sense of responsibility, encourage active participation in environmental initiatives, and contribute to the development of environmental awareness and culture.
