WATER-EFFICIENT LANDSCAPING AND GREENING AT LANKARAN STATE UNIVERSITY

Lankaran State University places particular importance on campus landscaping, the preservation of green spaces, and environmental protection. The planting of trees, shrubs, and ornamental plants across the university campus contributes to improving the campus environment and creating a more pleasant learning atmosphere.

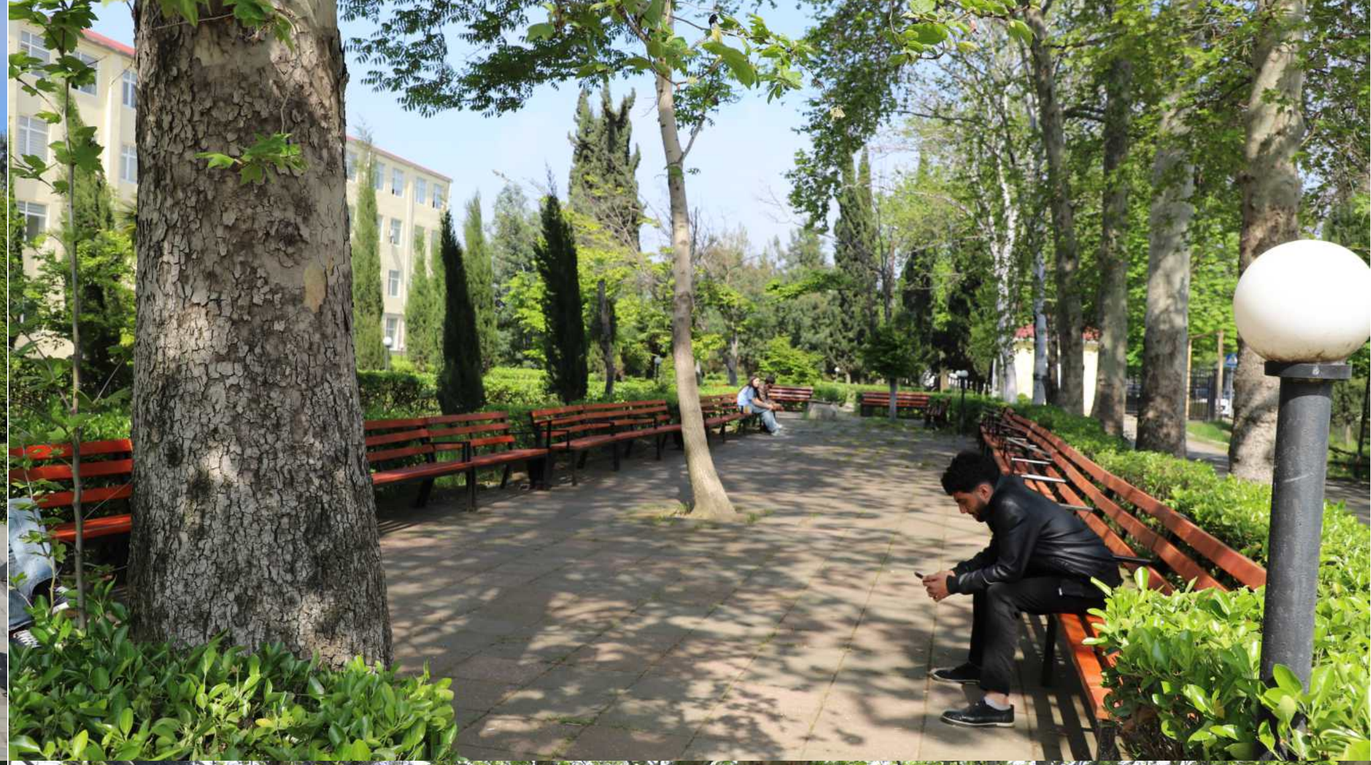

The efficient use of water resources is an important consideration in landscape planning and the maintenance of green spaces. Selecting plants suited to local climatic conditions and applying water-saving irrigation methods can help reduce water consumption and support the development of a sustainable campus environment.

These activities support the university’s efforts to preserve green spaces, use natural resources efficiently, and promote environmental sustainability.

GREEN SPACES AND CITRUS ORCHARDS AT LANKARAN STATE UNIVERSITY'S AGRICULTURAL TRAINING AND PRACTICAL TRAINING BASE

Lankaran State University (LSU) maintains a 2.7-hectare agricultural training and practical training base where lemons, mandarins, oranges, kiwifruit, feijoa, and other fruit crops are cultivated. The area contributes to the preservation of green spaces, the promotion of plant diversity, and the development of practical agricultural education.

Students of the Faculty of Agriculture and Engineering gain practical knowledge and skills in plant cultivation and care at the training base. The citrus fruits grown there are also used to support social responsibility initiatives. More than one tonne of citrus fruits cultivated by students was donated to eight children's residential care and social service institutions in Baku and the surrounding areas.

The university's agricultural training and practical training base provides valuable opportunities for preserving green spaces, cultivating plants, and promoting practical learning about the efficient use of natural resources.

LSU STUDENTS' PARTICIPATION IN TREE-PLANTING CAMPAIGNS AND CONTRIBUTION TO THE EXPANSION OF GREEN SPACES

Students of Lankaran State University (LSU) actively participate in tree-planting campaigns aimed at protecting the environment, expanding green spaces, and improving environmental conditions.

LSU students also took part in a tree-planting campaign held on Heydar Aliyev Avenue in Lankaran on the occasion of 27 September – Remembrance Day. The campaign was organized in tribute to the memory of the martyrs of the Patriotic War. A total of 500 evergreen trees were planted, including 200 Eldar pines, 200 cypress trees, and 100 thuja trees.

Such initiatives help raise students' environmental awareness and sense of responsibility, promote the preservation of green spaces, and contribute to environmental protection.

TEA CULTIVATION AND THE DEVELOPMENT OF TEA PRODUCTION AT LANKARAN STATE UNIVERSITY

Lankaran State University (LSU) places particular importance on agricultural education and practical activities that contribute to the study and development of tea cultivation, one of Azerbaijan's traditional agricultural sectors. The humid subtropical climate of the Lankaran region provides favourable conditions for growing tea plants.

Tea cultivation is important for enhancing knowledge of crop production, preserving local agricultural traditions, and promoting sustainable agricultural development. Students studying agriculture can acquire theoretical and practical knowledge of plant cultivation and care, as well as the assessment of soil and climatic conditions.

The development of tea cultivation supports the efficient use of agricultural resources, the conservation of biodiversity, and the strengthening of the region's agricultural potential. Studying this field also helps raise students' environmental awareness and promote the principles of sustainable agriculture.
